

Team sport project: Data extraction agreement

Sankey, Borg et al.

September 21, 2026

Data extraction agreement

Variable	n	Raw agreement	Gwet's AC1	95% CI
area	77	100%	1.00	1.00 to 1.00
sport	77	100%	1.00	1.00 to 1.00
environmental_context	77	99%	0.98	0.95 to 1.00
sex	77	97%	0.97	0.93 to 1.00
assessment_timeframe	77	96%	0.96	0.91 to 1.00
female_n	77	94%	0.93	0.87 to 0.99
age	77	91%	0.91	0.84 to 0.97
study_design	77	87%	0.82	0.70 to 0.94
sport_specific_skill	76	87%	0.86	0.78 to 0.94
constraint	76	86%	0.85	0.77 to 0.94
collective_behaviour	76	75%	0.70	0.59 to 0.82
assessment_technology	77	65%	0.63	0.52 to 0.75
study_context	76	63%	0.60	0.48 to 0.72
assessment_method	76	62%	0.60	0.48 to 0.72
underpinning_theory	77	55%	0.52	0.39 to 0.64
sample_size	77	23%	0.23	0.13 to 0.32
aim*	77	5%	0.05	-0.01 to 0.10
outcome_measure*	76	1%	0.01	-0.02 to 0.03
sport_specific_info*	77	1%	0.01	-0.02 to 0.03
assessment_described*	76	0%	-0.01	-0.01 to -0.01
assessment_sample_size*	77	0%	-0.01	-0.01 to -0.01
procedure*	73	0%	-0.01	-0.01 to -0.01

* Free-text field. Two reviewers describing the same study in their own words will rarely produce an identical string, so exact-match agreement understates reliability for these variables.

Results paragraph

Text below is written to agreement_paragraph.docx for pasting into the manuscript.

Data extraction agreement between the two reviewers was assessed across 22 variables for 77 studies. Raw agreement was as follows: area 100%, sport 100%, environmental context 99%, sex 97%, assessment timeframe 96%, number of female participants 94%, age 91%, study design 87%, sport-specific skill 87%, constraint 86%,

collective behaviour 75%, assessment technology 65%, study context 63%, assessment method 62%, underpinning theory 55%, sample size 23%, aim 5%, outcome measure 1%, sport-specific information 1%, assessment description 0%, assessment sample size 0%, procedure 0%. Agreement for aim, outcome measure, sport-specific information, assessment description, assessment sample size and procedure reflects exact matching of free-text responses and therefore understates the extent to which the reviewers agreed in substance.
